This application contains claims directed to the following patentably distinct species of the claimed invention:

(a) The epoxy resins such as the bisphenol A epoxy resin of claim 17 elected in parent application no. 10/082,278.

(b) The latent fluxing agents such as the reaction product of tall oil fatty acid and cyclohexyl vinyl ether employed in Example 1 on page 31, paragraph 108 of the specification which was elected in the parent application.

(c) The curing compounds such as the anhydride of claim 18 which was elected in the parent application.

(d) The composition with or without the filler of claim 24, wherein if its presence is elected, a particular species is designated from claim 24.

(e) The compositions with or without the optional epoxy resin adduct of a carboxyl terminated toughening agent defined in claim 27, the last three lines.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species within each of items (a) to (e) hereinabove for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 11-19 and 23-28 are generic.

A reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Steven C. Bauman on April 20, 2005 to request an oral election to the above election of species requirement, but did not result in an election being made. The reply to this requirement to be complete must include an election of the species to be examined even though the requirement be traversed (37 CFR 1.143).

The specification based on the preliminary amendment filed September 8, 2005 on page 1, paragraph [0001] line 2, after "February 26, 2002," should be amended to include "U.S. Patent No. 6,667,194," for parent application no. 10/082,278.

Art Unit: 1712

The claims of parent application no. 10/082,278 are directed to a method of bonding a die chip using the composition as defined in the claims of the instant application. The closest prior art to Zhou et al. Patent No. 5,985,043; PCT Publication No. WO 98/37134 and Konarski et al. Patent No. 6,458,472 set forth compositions comprising an epoxy resin, curing agent and hydroxyl- or carboxyl-functional fluxing agent. The claimed fluxing agent wherein the phenolic or carboxylic acid compound is liberated upon heating at above 140°C is not recited. There is no motivation to mask, block or protect the functional groups of the fluxing agents of the references to prevent activity until 140°C is exceeded.

The attached Notice of References Cited, Form PTO-892 lists references from parent application no. 10/082,278.
